# RedTitan Document Producer
Move beyond 'basic' mail merge packages.

The RedTitan Document Producer enables any kind of business documents to be generated, combining an intuitive design tool and high-speed production system all without the need for a programming team.

RedTitan are experts in solving all the real-world problems of large-scale document production: how to create perfectly formatted customised documents and deliver them to the right place at the right time. Our enterprise document portal includes a design and composition system and a sophisticated dynamic print server for the corporate network.

The professional choice for preparing documents is the RedTitan design system, a complete WYSIWYG page layout and document builder for high volume database publishing. It makes it easy to build Boolean conditions into the layout so that complete documents vary with the data records for 1:1 marketing messages.

Features like master forms, font control and an image library ensure a consistent 'look & feel' across your documents with dynamic layout, colour and content ensuring your message is clear, accurate but customised to your audience.

Multiple Input Hosts and Output devices are conveniently managed by the RedTitan nQ Spooler.

Data can be accepted as either database extracts (e.g. XML, CSV) or Text files.

The Document Formatter can be used to optimize the use of laser printers by automatically selecting and downloading appropriate fonts and forms at very high speed to give comprehensive text formatting and composition features without the need to build complex printer control codes into application programs.

The system manages proportional fonts, line widths and page ends so that each document is perfectly composed even with embedded data and complex Boolean conditions. Everything is taken care of from simple paragraphs to barcodes and dynamic graphics such as Pie and Bar charts.

The system will output to PostScript, PCL, AFP & PDF and will drive any printer that support these languages or for storage in retrieval systems.

For more information please either email help@redtitan.com or contact us by phone.
